

Collection

Data Visualization in Esports

Replay Parsing

With Python script, generate standard and digestable data format (ex. JSON)

Game Replay Collection

Use open-source tools to generate in-game script which extracts game data from Overwatch 2

Storage of Parsed Data

Data will be stored locally and uploaded for visualization purposes as needed.

Example Dataset for Demonstration

Store a small amount of example data to demonstrate tool capabilities without needing to upload

Providing a UX-focused tool for game data visualization and analysis

3D Visualizations of in-game maps

Collect 3D render of maps

Turn renders of maps into heatmap for teams to view

2D Graphical Visualizations

Create useful visualizations from collected data using existing libraries (VegaLite, d3.js)
